Biography of the author

Justyna Wróblewska was born on February 25th, 1987 in Racibórz, Poland. After finishing high school, she started studying Biotechnology at the University of Wrocław, Poland. In 2013 she earned her Master's degree by defending a thesis entitled: *Coordination of the nuclear and mitochondrial genomes expression in A. thaliana.* During her studies she spent five months of internship at the laboratory of Prof. Dr. Jesús de la Cruz (University of Seville, Spain), where she participated in research focused on biogenesis of the ribosomal subunits in *S. cerevisiae*. She moved to the Netherlands in 2013, upon being admitted to the Marie Curie ITN-PerFuMe program at the University of Groningen. She started her PhD studies in the group of Prof. Dr. Ida J. van der Klei at the Department of Molecular Cell Biology. The results of her research are described in this thesis. Currently, Justyna works in a biotechnology company - Pure Biologics S.A., where she is involved in projects employing aptamers as potential therapeutic molecules.
